

Transfer of non-.nl domainname

For a lot of domain estensions (.com/.net/.org/.biz and .info) you need a so called authentication code. Also the registrant email address should be pointing to an mailbox which you can read. The so called "registrar lock" should also be removed. We advice you to contact your current provider about this. After we have requested a domain transfer you will receive an email and you have to agree to it.

After we have received this form we will start the transfer procedure as soon as possible.

Signed,
